Tally Integration & WhatsApp Automation

Complete Preparation & Setup Guide for Automated Ledger Delivery

Multi-Tenant Cloud & Localhost Ready • Instant Verification & PDF Dispatch

1. OVERVIEW: THE 6-STEP AUTOMATION FLOW

This feature connects your WhatsApp Bot with TallyPrime / Tally.ERP 9 so clients can get instant ledgers.

CUSTOMER JOURNEY IN WHATSAPP

1. Trigger Message: Customer sends "ledger" (or "hisab", "statement", etc.) to your WhatsApp bot.
2. Phone Verification: Bot reads the sender phone and checks if registered in Tally Debtor ledgers.
3. Duration Menu: If found, bot asks: [1] 1 Month | [2] 3 Months | [3] 6 Months | [4] 12 Months
4. Instant Response: Customer taps/types choice -> Bot replies in 1 sec: "Please wait up to 10 min..."
5. Background Extraction: Server queries Tally via XML, calculates debits, credits, and closing balance.
6. Delivery: Server generates a branded PDF Statement and sends it directly to the customer on WhatsApp.

2. STEP 1: ENABLE TALLY XML / HTTP SERVER

Tally has a built-in XML Server used by third-party systems to read ledger statements safely.

1. Open TallyPrime or Tally.ERP 9 on your computer or office server.

2. Press F1 (Help) in the top menu -> Go to Settings -> Connectivity.
3. Open "Client/Server Configuration" and configure:
   - **Tally acts as: Both (or Server)**
   - **Enable ODBC / XML: Yes**
   - **Port: 9000 (Default port recommended)**
4. Press Ctrl + A to accept and save settings.
5. **Close and RESTART Tally for the XML Server to activate.**

HOW TO VERIFY TALLY SERVER IS RUNNING ON PORT 9000

Open any web browser (Google Chrome, Edge) on your Tally PC and open: http://localhost:9000
If Tally is active, your browser will show a plain white screen with the text: "Tally is Running!"

3. STEP 2: CONFIGURE CUSTOMER PHONE NUMBERS IN TALLY

The bot identifies incoming customers by matching their WhatsApp number with Tally ledger records:

1. In Tally Gateway, go to Alter -> Ledger (or Accounts Info -> Ledgers -> Alter).
2. Select your Customer (Sundry Debtors) Ledger.
3. Under Mailing Details / Contact Details, find the Mobile No or Phone field.
4. **Enter the customer mobile number (10 digits or with 91 prefix, e.g. 9876543210).**
5. Press Ctrl + A to save the ledger.

Note: If a customer has multiple branches or phone numbers, comma-separate them or add in contact.

Tally Integration & WhatsApp Automation Guide (Page 2)

4. STEP 3: CONNECTING TALLY (LOCALHOST VS REMOTE CLOUD)

Any user can hook up their own Tally instance based on where their bot runs:

CASE A: Bot and Tally are on the Same Local Machine / Office PC

- Server URL to use in Dashboard: http://127.0.0.1:9000 or http://localhost:9000
- No external networking or router changes needed. Immediate plug & play.

CASE B: Bot is on Cloud Server / VPS, Tally is at Your Office / Home PC

Because Tally runs behind your home/office router, create a secure tunnel so your cloud bot can query it:

Option 1 (Recommended & 100% Free): Cloudflare Tunnel

1. Download "cloudflared" for Windows: https://developers.cloudflare.com/cloudflare-one/
2. Open PowerShell / Command Prompt on your Tally PC and execute:

   cloudflared tunnel --url http://localhost:9000
3. It will give you a public secure URL like: https://company-tally.trycloudflare.com
4. **Paste that URL into the Tally Server URL field in your Bot Dashboard!**

Option 2: Ngrok (Command: ngrok http 9000)

Option 3: Static Public IP & Router Port Forwarding on Port 9000.

5. STEP 4: ADDING TALLY TEMPLATE IN THE BOT DASHBOARD

1. Log in to your Cortex AutoBot Dashboard and click Bot Configurations & Templates.
2. Click "+ Create Template" and choose "Tally Ledger Bot" from the template picker.
3. Fill in your Tally parameters:
   - Template Name: e.g. "Customer Ledger Bot"
   - Tally Server URL: http://localhost:9000 (or your Cloudflare Tunnel URL)
   - Company Name: Exact name open in Tally (e.g. "Acme Traders Pvt Ltd")
   - Trigger Keywords: ledger, leadger, statement, hisab, khata
   - Durations: 1 Month, 3 Months, 6 Months, 12 Months
   - Wait Message: "Please wait up to 10 min, your ledger is being generated..."
4. **Click "Test Connection" -> A green badge confirms active communication with Tally.**
5. **Click "Save Template & Apply" -> Your 24/7 Tally WhatsApp bot is now live!**

6. FREQUENTLY ASKED QUESTIONS & TROUBLESHOOTING

TALLY BOT CHECKLIST

Q1: What happens if Tally is closed or the PC is turned off?
-> The bot will respond: "Our accounting system is currently synchronizing. Please try later."
Q2: Can different users connect to different Tally companies?
-> YES. Each registered user has their own isolated config, company name, and WhatsApp session.
Q3: Does the customer get an official PDF statement?
-> YES. The PDF includes voucher dates, particulars, debit, credit, opening balance, and closing balance.
Q4: What if Tally is running in Cloud and the Cloud server is closed/offline?
-> The bot detects the timeout and safely replies: "Our accounting cloud server is currently undergoing scheduled maintenance. Please try later." To ensure 24/7 uptime, keep the Cloud VM running.
